

Technical Leadership Overview

Rankira Kosgollage (PU Id - 10899228) - Technical Leader

Objective:

The responsibilities and tasks performed by the Technical Leader throughout the first stage of the development of the HealthCare mobile app are described in this document. As the Technical Leader, it is my responsibility to supervise the application of best practices and guarantee that technical decisions are in line with project objectives.

1. Technology Stack Validation:

- Examined and verified that the technology choice made by the programming leader aligns with the technical specifications and objectives of the project.
- Verified that the chosen technologies, including React Native and Expo, were suitable for scalability, performance, and long-term maintenance.

2. Development Process Definition:

- Collaborated with the Programming Leader to create a structured development process using industry best practices.
- Established coding standards, version control methods, and documentation practices to maintain consistency throughout development teams.

3. Technical Team Collaboration:

- Improved team communication and collaboration for a good and productive work environment.
- Conducted team meetings to address technical challenges, share insights, and ensure everyone is aligned with the project's technical direction.

4. Code Review Process:

- Implemented a code review process to ensure the quality and consistency of code across the development team.
- Organized regular code review meetings to provide constructive feedback, share knowledge, and maintain code quality standards.

5. Technology Trends Monitoring:

- Began tracking new technologies, tools, and best practices for mobile app development.
- Informed the team of the latest industry trends and prospective project enhancements.

Conclusion:

As Technical Leader, my main tasks have included verifying the chosen technology stack, developing a robust development process, encouraging team cooperation, implementing a code review process, and staying updated on industry trends. These efforts are meant to ensure the technical success and sustainability of the HealthCare mobile app development project.
